

## RADIODDITY GD-77 GETTING STARTED

1. Install GD-77 software on your computer.  
<https://www.radioddity.com/pages/radioddity-download>
2. Download the CFMC Code Plug from the CFMC web site [www.cfmc.us](http://www.cfmc.us)
3. Save the file to C:\Radioddity\GD-77 v3.1.9\DATA
4. Click on the open folder in the top tab bar and select the code plug.
5. Double click on Boot Items and enter your call sign and phone number.
6. Double click on General Settings and enter your call sign and ID Number. If you do not have an ID Number yet go to <https://www.radioid.net/register#!>
7. On top bar select SAVE DISK and save to new file. Example, your call sign.
8. Plug programming cable into portable. Be sure to push all the way in. Note, speaker is muted when cable is in.
9. On top bar select upload arrow and upload your new program to the portable.
10. You are now on the air. give it a try!
11. The black button located under the PPT button is SCAN. Press it while on 28/88 or LOC9.

The green button takes you into settings. Red button takes you out of settings. Zones select different programmed configurations. You can now choose between:

CINCY which includes several large area Talk Groups. You will receive all the Talk Groups all the time. If you want to receive a select few you can create a new ZONE.

CFMC REPEATERS includes just our repeater. LOC9 is CFMC repeater only.

FLORIDA I left this one in here so you can have another example. If you get to Fort Meyers Florida give it a try.

It seems very complicated at first. When you make changes save as a new code plug. If you mess things up just reload your latest good code plug.

You will be able to get help on LOC9 from other users. I am not an expert, but I am here to help you.
